

## Russell Rawat professional statement

I am an aspiring cybersecurity professional with a solid foundation in information technology and a growing passion for safeguarding digital systems, networks, and data. Having completed a Level 3 Certificate in Information Technology and currently pursuing the Google Cybersecurity Certificate, I am developing a strong understanding of key cybersecurity principles such as network defense, threat analysis, risk assessment, incident response, and ethical hacking. These studies have provided me with both technical insight and hands-on experience using industry-standard tools and methodologies to identify, assess, and mitigate security threats.

Beyond my academic achievements, I have gained valuable professional experience as a Teaching Assistant and Lead Concierge. These roles strengthened my attention to detail, situational awareness, and communication skills, essential qualities for recognizing potential risks, maintaining vigilance, and collaborating effectively under pressure. Working in customer-facing and operational environments also enhanced my ability to remain calm in challenging situations, think critically, and apply problem-solving strategies to ensure safety, efficiency, and compliance.

By combining my technical knowledge with strong analytical and interpersonal skills, I aim to help organizations strengthen their cybersecurity posture, reduce vulnerabilities, and ensure compliance with industry standards. I am committed to supporting security teams in protecting data, maintaining operational continuity, and building trust in digital systems.

I am deeply motivated by the mission of protecting people and organizations in an increasingly digital world. My values of integrity, accountability, and continuous learning drive me to pursue excellence in everything I do. I am currently seeking a cybersecurity degree apprenticeship where I can build on my technical knowledge, apply my skills in real-world contexts, and contribute to the development of secure, resilient IT infrastructures. Through ongoing learning and hands-on experience, I aim to grow into a skilled cybersecurity analyst dedicated to defending digital assets and supporting organizational security objectives.
